Abstract

The generative approach to the Ravenna Identity is performed by generating several Mosaic-Architectures with the reference of mosaic structure and putting them in the Ravenna environment using a mirror for enhancing the structure of variations. Each generated scenario exists also because is one of possible variations, as in Nature, but in the same time, it is unique, un-repeatable and, mirroring the mosaic artworks, really complex and appreciable at different scales. Ravenna is a complex city where the sea presence and the historical centre are two different faces of the same feeling. The generated Mosaic-Architectures try to make a link between these two faces of its Identity, enhancing the unique and peculiar feeling of this city.
