*... and they crossed complex paths,  
building experiences of memory and imagination.*

These posters are made by the students of the Course and Lab of Architectural Composition and Generative Design at the VI School of Engineering/Architecture, Politecnico di Milano at Lecco, presented in June 2010 at the Generative Art happening in Lecco. They are the results of our teaching on the Academic Year 2009/2010 for imprinting an education to design performed as a generative process.

Through a remembering, for each student, of his/her own past experience, especially of infancy, the aim is to discover meta-codes for designing the actual quality of the new artificial ware.

After the design of an house, of a kindergarden and of a tower building, these posters are the final experience of the imaginary design of Eden.
