1. Magnetic Sun

Magnetic Sun

The sun drives us into its powers: real and mythological ones. It's made of plasma, which we name the fourth state of matter: gas-like where electrons and ions got separated forming a very hot mixture of charged particles. They create a magnetic field by moving, which in turn creates another effect on how they move. We associate the sun with warmth, power, and energy, and we develop myths and stories. We are drawn to it, benefit from it, if we can keep the proper distance and precautions.

Abstract

Coded Universe is juxtaposed with some spatial characters behaving according to the physical laws we are familiar with. The poem guides the audience to think about the pleasures and dangers resulting from what surrounds us.
